Machine Learning

Machine learning is the “field of study that gives computers the ability to learn without being explicitly programmed”.

- Arthur Samuel, Machine Learning Pioneer

Machine Learning

The program improves its performance through *experience*.

Here, experience equates to past information/data.

Types of Machine Learning

Three Main Types of Machine Learning:

1. Supervised Learning
2. Unsupervised Learning
3. Reinforcement Learning

Types of Machine Learning

Supervised Learning:

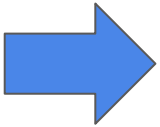
- Labeled data
- Goal: find a function to predict the label/outcome given input data/features.
- Direct feedback

Supervised Learning

How much will this house sell for?

Supervised Learning

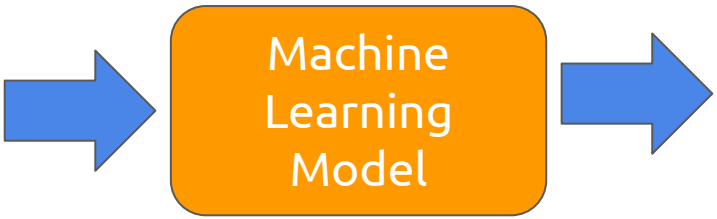
How much will this house sell for?



Machine Learning Model

Supervised Learning

How much will this house sell for?

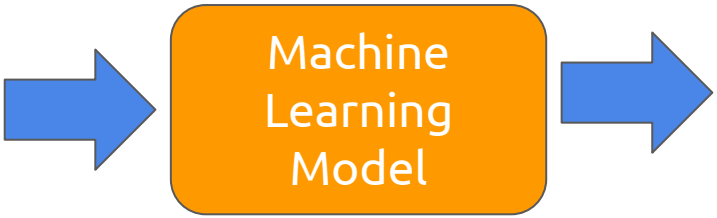


Prediction:
$450,000???

Supervised Learning

You're way off. It's actually $180,000

How much will this house sell for?



Prediction:
$450,000???

Supervised Learning

How much will this house sell for?

Machine Learning Model

Prediction:
$450,000???

I'll try to do better next time.

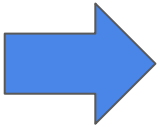
You're way off. It's actually $180,000

Supervised Learning

Try again.
What about this house?

Supervised Learning

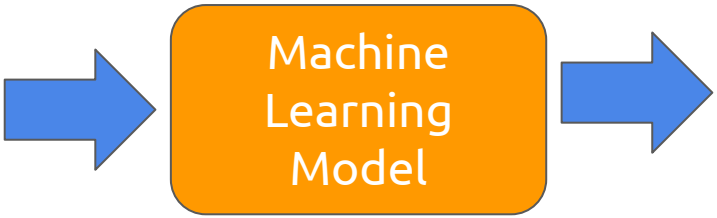
Try again.
What about this house?



Machine Learning Model

Supervised Learning

Try again.
What about this house?

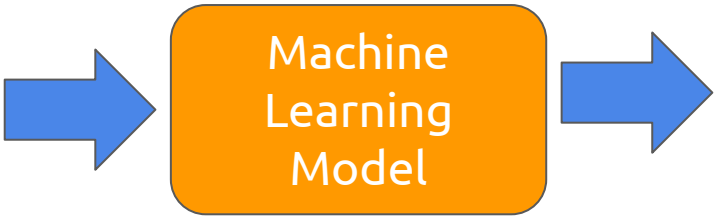


Prediction:
$360,000??

Supervised Learning

You're closer. It's actually $285,000

Try again.
What about this house?



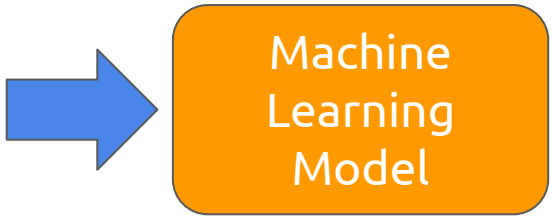
Prediction:
$360,000??

Supervised Learning

After seeing lots of examples, the model gets better at predicting.

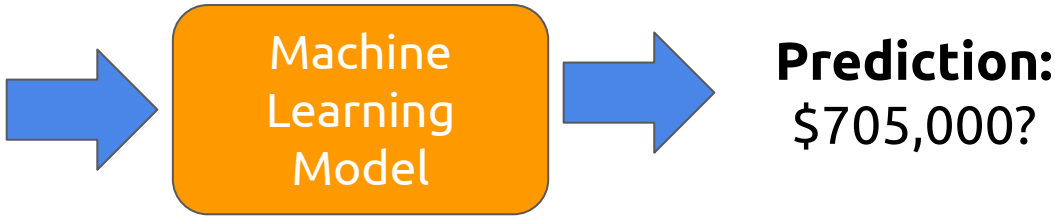
Supervised Learning

After seeing lots of examples, the model gets better at predicting.



Supervised Learning

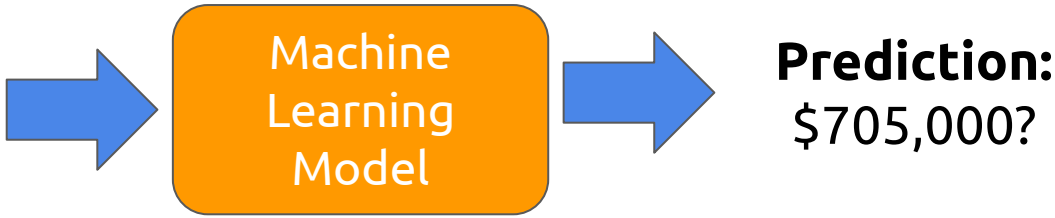
After seeing lots of examples, the model gets better at predicting.



Prediction:
$705,000?

Supervised Learning

After seeing lots of examples, the model gets better at predicting.



Not bad. It's actually $719,000

Supervised Learning Models

- Linear/Logistic Regression (common statistical models)
- Decision Trees
- Ensemble Methods
- Neural Networks

These will be the focus of the later portions of the course

Types of Machine Learning

Unsupervised Learning:

- Unlabeled data - features but no known outcome
- Goal: find underlying structure in the dataset
- No direct feedback

Types of Machine Learning

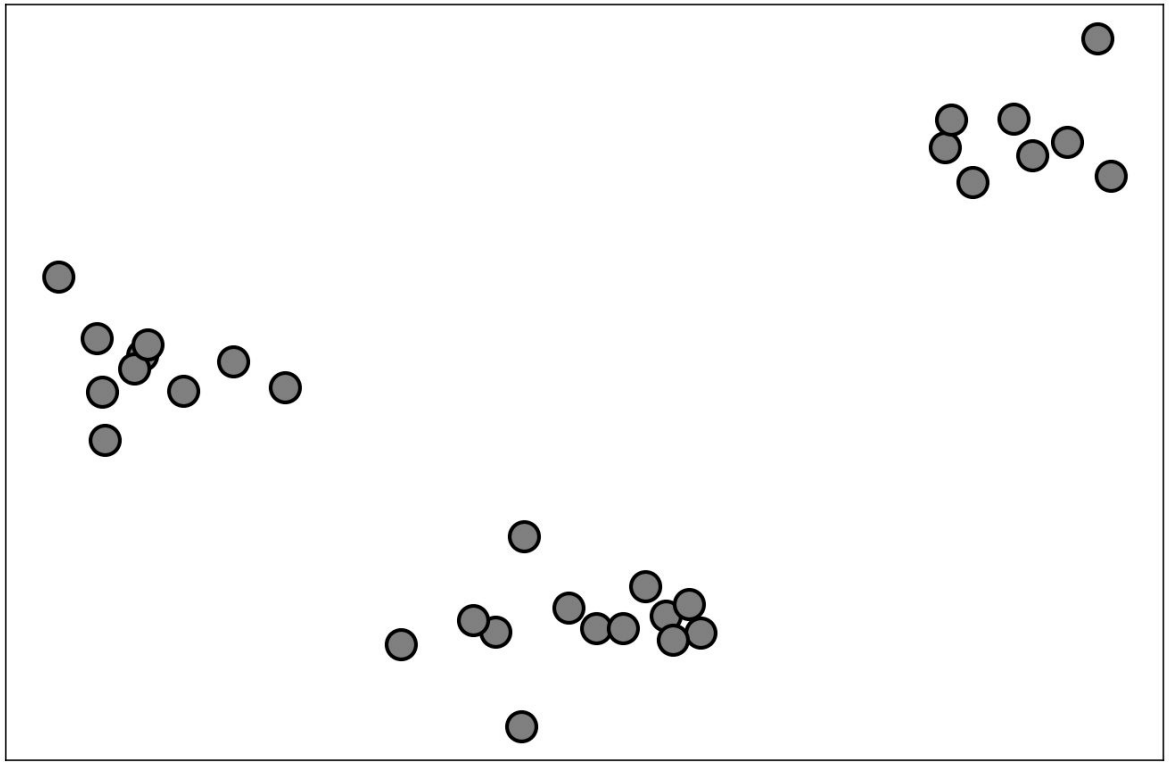
Unsupervised Learning:

- Unlabeled data - features but no known outcome
- Goal: find underlying structure in the dataset
- No direct feedback

Common Tasks:

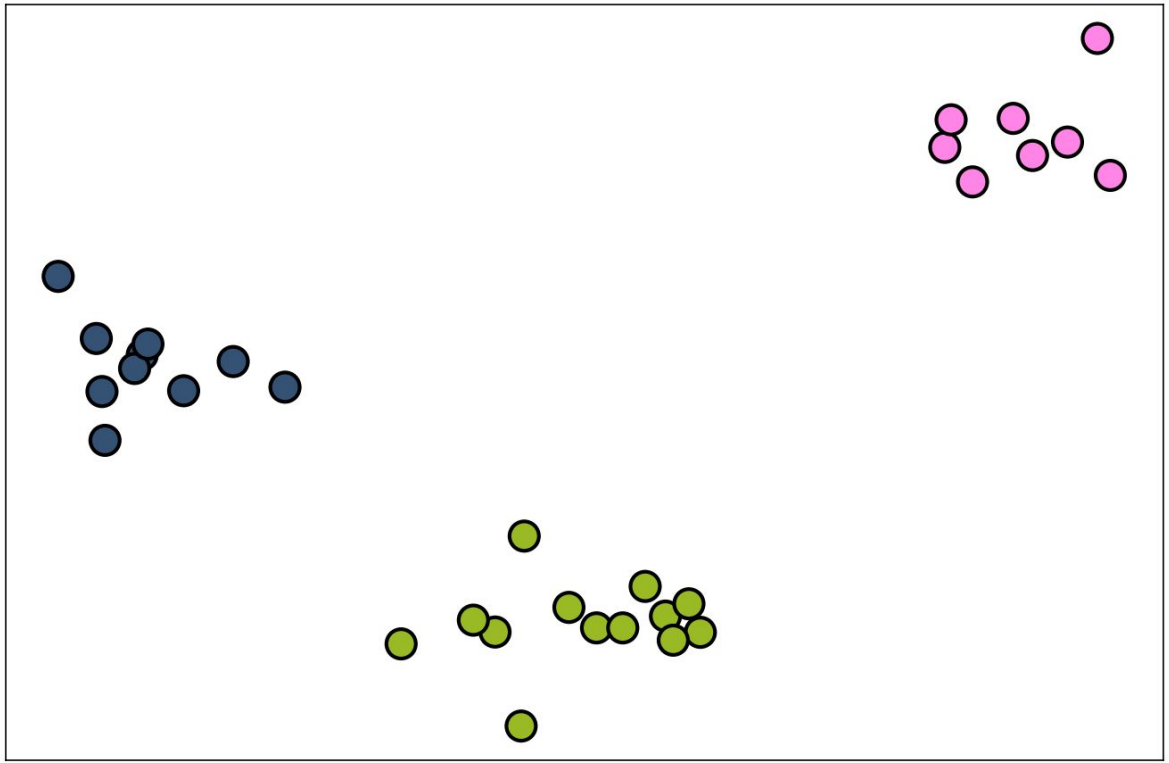
- Clustering
- Dimensionality Reduction
- Anomaly Detection

Unsupervised Learning



Can be used to uncover groupings or clusters in a dataset.

Unsupervised Learning



Can be used to uncover groupings or clusters in a dataset.

Unsupervised Learning

Can give a lower-dimensional representation of a high-dimensional dataset.

10-Dimensional Dataset

2-Dimensional Representation

Types of Machine Learning

Reinforcement Learning:

An **agent** interacting with an **environment** by taking **actions** with the goal of maximizing a cumulative **reward**.
